
Nerve Entrapment

- Occurs when pressure is applied to a nerve via subluxation or scar tissue.
- Use adjustments and manipulation and mobilization to remove nerve pressure and correct the issue.
- In cases located in the feet, such as Morton's Neuroma, orthotics can help prevent the metatarsals from shifting back into their previous position and causing re-injury.

Organ referred Pain

When particular organs are in distress, diseased or inflamed, they may refer pain to the outer extremities, along nerve lines called dermatomes. For example the gall bladder will cause right shoulder pain. An EI scan will show if any of the organs which commonly refer are in crisis and the correct nutritional and supplemental steps can be taken to correct the problem.

Emotional Origin Pain

When stressed or over taxed the mind can cause physical symptoms derived from emotional dysfunction. For example, in clinical depression, individuals will often experience whole body tiredness and body aches much like the flu. In traditional Chinese medicine, the various areas of the body are related strongly to particular emotion and are susceptible to dysfunction from that emotion. Utilizing a Voice Bio, the body's organs function levels will be measured and if emotional causes are determined, EFT can be used to overcome and modify the negative emotion into positive behaviors.

Result:

The final diagnosis can be any one issue or a combination of them all. By utilizing our comprehensive diagnostic tools we will find the root of your problem and lift you back up to pain free health.

For Patients suffering from complex issues, we suggest taking advantage of our Complete Health Analysis (CHA) promotion, with which you can visit each practitioner for an initial consultation, for 1/2 price! No other clinic offers this opportunity to be assessed as a whole being, rather than as a collective of parts. **Ask at Front Desk Today!**
