

Hasan's Testimonial:

Hasan is about ten and a half months now and was suffering from excessive spit up also known as reflux. We have been coming to Dr. Poncelet since Hasan was 6 months. Through his adjustments and kind constant advice Hasan has flourished. He no longer spits up and has good weight gain. Also, through discussions with Dr. Poncelet, we have learned a lot about proper infant nutrition, and treating teething pain and colds through use of natural products and remedies.

Also, Hasan is part of Dr. Poncelet's study to help alleviate his eczema. Hasan is making good progress in this area.

We are not sure what we would have done without Dr. Poncelet and his care. We would probably still continue to feel overwhelmed and feel that no help was available to help address his pretty major health concerns from our perspective.
